Our Vision

Focusing on ultimate leadership and serving humanity with our Quality Instruments.

Our Mission

We will create a new concept of market leadership. We are serving humanity with high quality, safe and durable products.

We will enhance this vision by giving exceptional after sales services and support to our clients.

We will serve the mankind aiming to upgrade health care care services and providing patients and doctors with latest and highest medical services quality.

Our Goals

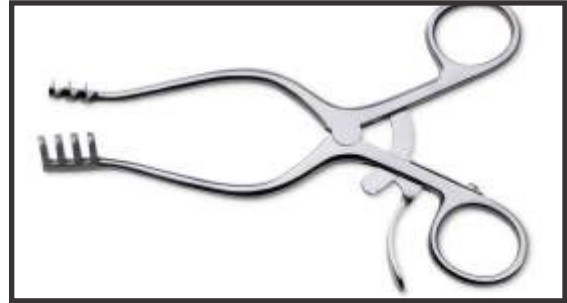

Producing an internationally quality standard instruments.
Improve our products quality and after sales services to meet the international standards.
Exceed our client's expectation and desire.
Proving our credibility and reliability related to all technical as well as ethical aspects.

Different Types of Finishing

Standard / Dull Finish

Instruments with their real original stainless steel image supported by a satin/dull finish with minimal light reflection. Those instruments are the standard used by all surgeons everywhere. You can easily find different varieties and different specialities available on our stock.

Mirror Finish

Standard finish made of high quality stainless steel provided in a shiny mirror finish. Those instruments are made upon customer request to have this unique image and shine of silver. It gives the instrument a shape of dignity.

TC Gold Finish

These types of instruments have a Tungsten Carbide tip with Gold plated handle. These types of instruments have a very long working life.

Color Coated Finish

Titanium or Plasma Color coating is mostly used in Beauty instruments which makes the items very durable, safe from rust, and also makes them very shiny, color full, eye catching. It is available in different colors.

EXTRACTION FORCEPS

Special Wisdom Routerier Extraction Forceps

Their offset design will allow you to reach around obstacles and protect the corners of patient's mouth whenever their mouth openings are restricted or their jaws have been firmly clamped in position. Their slim compact design allows readily accessing molar areas.

Forceps "Blade Beaks"

1. "Blade Beaks" smoothly penetrate in contact with the root.
2. They have large contact surface for a secure grip.
3. They take care of the tissues and assure tooth fracture risk reduction.
4. They give better control over the root during the extraction operations.

Secure-Line Extraction Forceps

These forceps will allow you to complete any extraction and work more efficiently even if complication arise. If teeth break during extraction, these are the tools you need to rapidly, safely solve your problems. These forceps have special, all-purpose, jaws designed to cover a broad range of applications and have sharp pointed tips that allow separating the tips of roots from surrounding tissues by lightly twisting them and then securely trapping the extracted roots in the gaps between their jaws.

INTRALIGAMENTAL SYRINGE - INJECT

ORA-326
"Suitable for uppers and lowers, just turning the front barrel"

ADVANTAGES OF INTRALIGAMENTAL ANESTHESIA:

- Automatic limitation of the power pressure.
- Anesthetizing of a single tooth.
- No numbness of the tongue, lips or cheek.
- Simultaneous treatment of teeth in different quadrants.
- Supports regional block anesthesia.
- Eliminates the risk of haematoma.
- Lower emotional impact on patient.

WHY INTRALIGAMENTAL IS BETTER

Because it's chrome free.
Because you can get a better sterilization.
Because you can use for long time'
Because has anti-reflection surface.

OPERATING FEATURES:

- Fully autoclavable.
- Removable headpiece with angled threaded nozzle for the injection needle.
- Viewing chamber with safety sleeve for carpule cartridge.'
- Handle servo dosing lever with optimal support for index finger' for a gradual advance of the dosing plunger resetting key.
- No waiting time between injections and beginning of treatment.
- Excellent depth of anesthesia combined with shorter duration.
- Much less pain than standard injections (infiltration anesthesia in hard palate, intrapulpal or intraseptal injections or for papillectomy).
- A smaller quantity of given anaesthetic (~0,06 ml for single injection/click.)
- Needle suggested: 30G.

Luxagrip Luxation Instrument

Over recent years, there has been an increased demand for reduced trauma during extraction procedures. The use of elevators has become widespread for the loosening of teeth before the application of forceps. TRUST & CARE Luxation instruments tips are more finely tapered than elevators tips. Their characteristics are a combination of a Periosteal and an elevator. The sharp tip enables more efficient cutting of the periodontal ligament, whilst the tapering shaft assists with controlled expansion of the bony socket. The extraction operation may be performed with the minimum amount of tissue damage. Healing is therefore quicker and the operation is less distressing for the patient and surgical team alike.

The Luxagrip Kit comprises of seven Luxation instruments, a straight, curved, inverted curved & contra blade version in Three different widths. Also available in dual edge blades

- L-2S Straight Blade-Green-2mm - Apical and/or Interproximal
- L-3C Curved Blade- Black- 3mm General use/Starter
- L-3S Straight Blade- Grey- 3mm Interproximal
- L-3CA Contra Angle- Blue-3 mm Lingual and/or distal-Molars
- L-3IC Inverted Curved- Light Blue 3mm- General, Lingual and/or Distal
- L5C Curved Blade- Brown- 5mm- Large molar roots-General use
- L5S Straight Blade- Yellow- 5mm- Interproximal
- DE3 dual edge/straight grey 3mm/ 1.5 mm
- DE5 dual edge/straight brown 5 Deep fractured/Decayed Roots

PER-109

PERIOTOMES

Thin sharp blades used to facilitate the removal of teeth with minimal damage to the surrounding alveolar bone by severing the periodontal ligament. May be used wherever an extraction is indicated, but are particularly important when considering the placement of a dental implant.

Removal of:-

Permanently cemented crowns and /or bridges
 Temporarily cemented provisional or inlay restorations.

Maryland bridges

Orthodontic brackets/bands

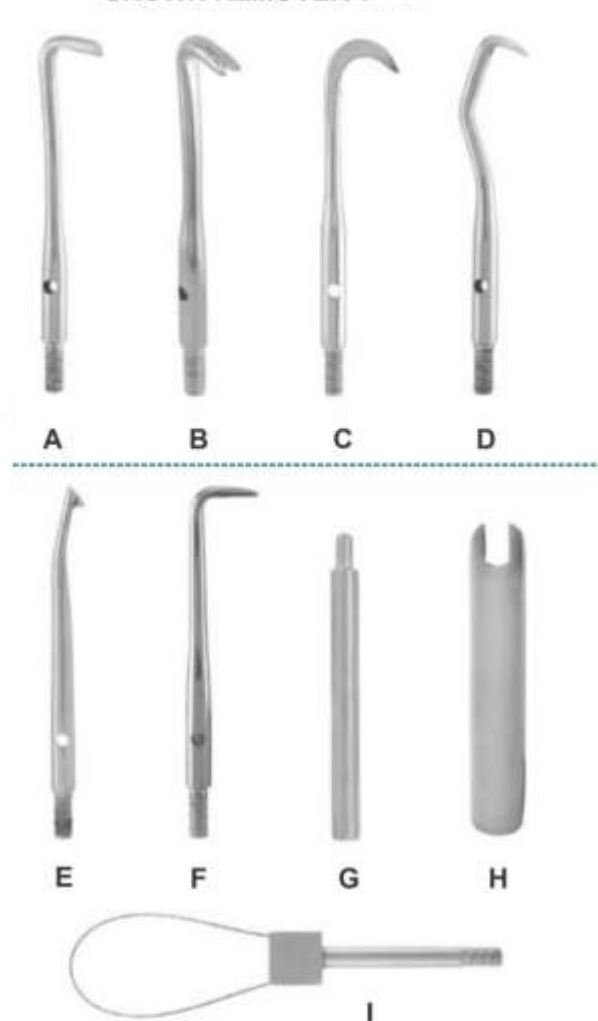

Removable appliances "stuck" at attachments

Multi-unit restoration "stuck" on working lab model

Basic Kit Includes:-

- Crown and Bridge Remover T-787/T-788
- Single crown remover tip # A
- Crown remover tip Blid # B
- Crown & bridge removing tip Sickle # C
- Single crown remover Contra angle tip # D
- Single crown remover tip Inverted curved # E
- Single crown remover tip straight # F

CROWN REMOVER T

- Tips adjustment Key # G
- Open-end adjustment wrench # H
- Bridge remover Flexi-wire set # I

Precautions

1. To remove crowns placed over pins or screw-type posts, use lowest "strike intensity" to prevent fracture.
2. This instrument could cause damage to the margins of soft gold crowns. If re-use is anticipated, cut a small groove parallel to the lingual margin.
3. Highest strike intensity could cause root fracture; be careful in long span restorations.
4. Only low intensity strike force should be used with teeth having high mobility and little bone support.
5. For highest strike intensity settings, let the individual situation and common sense prevail.

PRO-050

ATRAUMATIC Crown Removers can be use on
all 32 teeth : Buccal & Lingual

It can be used on:

*Implant *Zirconia *Temporary *Bridges *Regular

- Step 1. Drill 2mm hole in the top of the crown, making sure the hole is deep enough to touch the tooth.
- Step 2. Drill a hole on the side of the crown (if you do not have a workable margin) until the talon reaches the tooth.
- Step 3. Place the tip of the remover into the top of crown hole you drilled.
Place the talon under the side of the margin or into the purchasing point to engage and squeeze.

- * No more sectioning.
- * No more worrying over root damage.
- * Save time and money.
